#### HOW TO USE THIS MANUAL

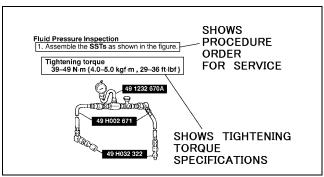

#### **Range of Topics**

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
  - Removal/Installation
  - Disassembly/Assembly
  - Replacement
  - Inspection
  - Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

A3U00000001W01

#### Service Procedure Inspection, adjustment

 Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.

ZLU0000W208

#### Repair procedure

- 1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.
- 2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.
- 3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.

#### Symbols

• There are eight symbols indicating oil, grease, fluids, sealant, ane the use of **SST** or equivalent. use. These symbols show application points or use of these materials during service.

| Symbol | Meaning   | Kind   |
|--------|-----------|--|
| on     | Apply oil | New appropriate<br>engine oil or gear<br>oil |

| Symbol     | Meaning   | Kind   |
|------------|---|--|
| ALUR       | Apply brake fluid                                   | New appropriate<br>brake fluid                                   |
| AT         | Apply automatic<br>transaxle/<br>transmission fluid | New appropriate<br>automatic<br>transaxle/<br>transmission fluid |
|            | Apply grease  | Appropriate<br>grease  |
| I SEALANT. | Apply sealant                                       | Appropriate<br>sealant   |
| Ø          | Apply petroleum jelly                               | Appropriate<br>petroleum jelly                                   |
| R          | Replace part  | O-ring, gasket,<br>etc.  |
| SST        | Use SST or<br>equivalent                            | Appropriate tools  |

#### **Advisory Messages**

• You'll find several Warnings, Cautions, Notes, Specifications and Upper and Lower Limits in this manual.

#### Warning

• A Warning indicates a situation in which serious injury or death could result if the warning is ignored.

#### Caution

• A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.

#### Note

• A Note provides added information that will help you to complete a particular procedure.

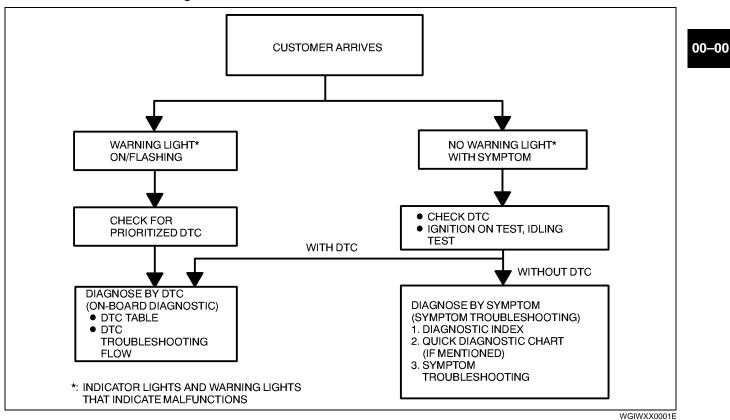

#### Specification

• The values indicate the allowable range when performing inspections or adjustments.

#### Upper and lower limits

• The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

#### Troubleshooting Procedure Basic flow of troubleshooting

#### DTC troubleshooting flow (on-board diagnostic)

- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on-board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on-board diagnostic function.

#### **Diagnostic index**

• The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

#### Quick diagnosis chart (If mentioned)

• The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

#### Symptom troubleshooting

• Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

#### **Procedures for Use**

#### Using the basic inspection (section 05)

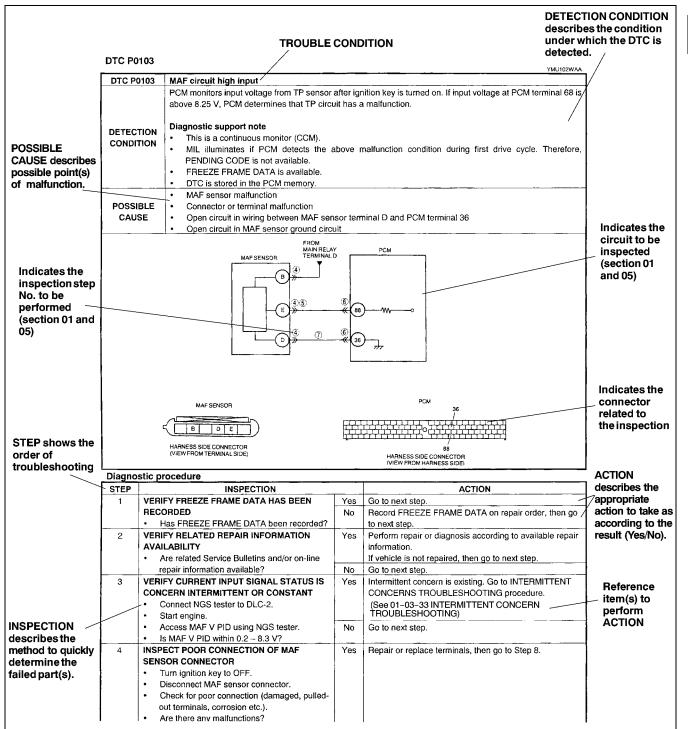

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
- The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the remarks column.

| SHOWS                 |      | ECTION SHOWS ITEM<br>DETAILED PR  |           |   | G |

YLU000WA8

#### Using the DTC troubleshooting flow

 DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

YLU000WA1

00–00

#### Using the diagnostic index

- The symptoms of the malfunctions are listed in the diagnostic index for symptom troubleshooting.
  The exact malfunction symptoms can be selected by following the index.

| NO | TROUBLESH                  | IOOTING ITEM        | DESCRIPTION   | PAGE   |
|----|----------------------------|---------------------|---|--|
| 1  | 1 Melts main or other fuse |                     |   | (See 01-03-6 MELT NO.1<br>MAIN OR OTHER FUSE)                |
| 2  | MIL comes on               |                     | MIL is illuminated incorrectly.   | (See 01-03-7 NO.2 MIL<br>COMES ON)                           |
| 3  | Will not crank             |                     | Starter does not work.  | (See 01-03-8 NO.3 WILL<br>NOT CRANK)                         |
| 4  | Hard start/long crank/e    | rratic crank        | Starter cranks engine at normal speed but<br>engine requires excessive cranking time<br>before starting.  | (See 01-03-9 NO.4 HARD<br>START/LONG<br>CRANK/ERRATIC CRANK) |
| 5  | Engine stalls              | After start/at idle | Engine stops unexpectedly at idel and/or after start.   | (See 01-03-11 NO.5 ENGINE<br>STALLS-AFTER START/AT<br>IDLE)  |
| 6  | Cranks normally but wi     | ill not start       | Starter cranks engine at normal speed but<br>engine will not run.   | (See 01-03-15 NO.5<br>CRANKS NORMALY BUT<br>WILL NOT START)  |
| 7  | Slow rerun to idle         |                     | Engine takes more time than normal to return to idle speed.   | (See 01-03-19 NO.7 SLOW<br>RERUN TO IDLE)                    |
| 8  | Engine runs rough/rollir   | ng idle             | Engine speed fluctuates between specified<br>idle speed and lower speed and engine<br>shakes excessively. | (See 01-03-20 NO.8 ENGINE<br>RUNS ROUGH/ROLLING<br>IDLE)     |
| 9  | Fast idle/runs on          |                     | Engine speed continues at fast idle after<br>warm-up.<br>Engine runs after ignition switch is turned off. | (See 01-03-23 NO.9 FAST<br>IDLE/RUNS ON)                     |
| 10 | Low idle/stalls during d   | leceleration        | Engine stops unexpectedly at beginning of<br>deceleration or recovery from deceleration.                  | (01-03-24 NO.10 LOW<br>IDLE/STALLS DURING<br>DECELERATION)   |

YLU000WA9

#### Using the quick diagnosis chart

- The chart lists the relation between the symptom and the cause of the malfunction.
  The chart is effective in quickly narrowing down the relation between symptom and cause of the malfunction. It also specifies the area of the common cause when multiple malfunction symptoms occur.
- The appropriate diagnostic inspection relating to malfunction cause as specified by the symptoms can be • selected by looking down the diagnostic inspection column of the chart.

#### Conversion to SI Units (Système International d'Unités)

 All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

#### **Rounding Off**

• Converted values are rounded off to the same number of places as the SI unit value. For example, if the SI unit value is 17.2 and the value after conversion is 37.84, the converted value will be rounded off to 37.8.

#### Upper and Lower Limits

 When the data indicates upper and lower limits, the converted values are rounded down if the SI unit value is an upper limit and rounded up if the SI unit value is a lower limit. Therefore, converted values for the same SI unit value may differ after conversion. For example, consider 2.7 kgf/cm<sup>2</sup> in the following specifications:

• The actual converted values for 2.7 kgf/cm<sup>2</sup> are 264 kPa and 38.4 psi. In the first specification, 2.7 is used as an upper limit, so the converted values are rounded down to 260 and 38. In the second specification, 2.7 is used as a lower limit, so the converted values are rounded up to 270 and 39.

#### FUNDAMENTAL PROCEDURES

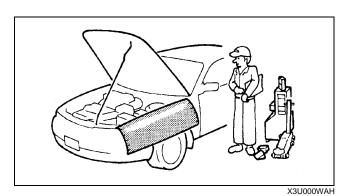

#### **Protection of the Vehicle**

 Always be sure to cover fenders, seats and floor areas before starting work.

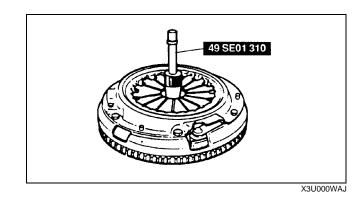

#### **Preparation of Tools and Measuring Equipment**

• Be sure that all necessary tools and measuring equipment are available before starting any work.

Special Service Tools

• Use special service tools or equivalent when they are required.

#### **Oil Leakage Inspection**

• Use either of the following procedures to identify the type of oil that is leaking:

#### Using UV light (black light)

1. Remove any oil on the engine or transaxle.

#### Note

- Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil or ATF (or transaxle oil).
- 2. Pour the fluorescent dye into the engine oil or ATF (or transaxle oil).
- 3. Allow the engine to run for 30 minutes.
- 4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
  If no dye leakage is found, allow the engine to run for another 30 minutes or drive the vehicle then
  - If no dye leakage is found, allow the engine to run for another 30 minutes or drive the vehicle then reinspect.
- 5. Find where the oil is leaking from, then make necessary repairs.

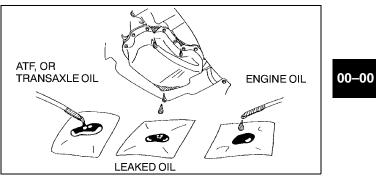

#### Note

• To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

#### Not using UV light (black light)

- 1. Gather some of the leaking oil using an absorbent white tissue.
- 2. Take samples of engine oil and ATF (or transaxle oil), both from the dipstick, and place them next to the leaked oil already gathered on the tissue.

- 3. Compare the appearance and smell, and identify the type of oil that is leaking.
- 4. Remove any oil on the engine or transaxle.
- 5. Allow the engine to run for 30 minutes.
- 6. Check the area where the oil is leaking, then make necessary repairs.

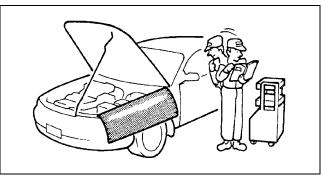

YMU000WAH

#### **Disconnection of the Negative Battery Cable**

• Before beginning any work, turn the ignition switch to LOCK position, then disconnect the negative battery cable and wait for more than 1 minute to allow the backup power supply of the SAS control module to deplete its stored power. Disconnecting the battery cable will delete the memories of the clock, audio, and DTCs, etc. Therefore, it is necessary to verify those memories before disconnecting the cable.

#### **Removal of Parts**

 While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and subassemblies must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.

X3U000WAK

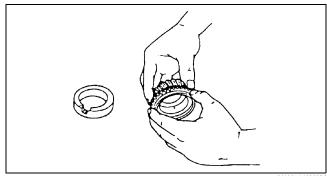

#### Disassembly

 If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance and identified so that reassembly can be performed easily and efficiently.

Inspection During Removal, Disassembly

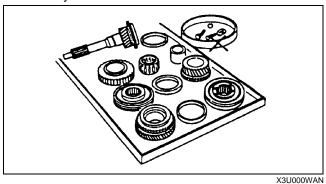

• When removed, each part should be carefully inspected for malfunction, deformation, damage, and other problems.

X3U000WAM

#### **Arrangement of Parts**

- All disassembled parts should be carefully arranged for reassembly.
- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.

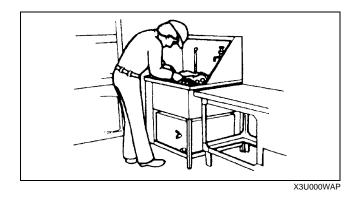

#### **Cleaning of Parts**

All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

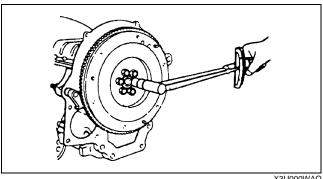

#### Warning

 Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.

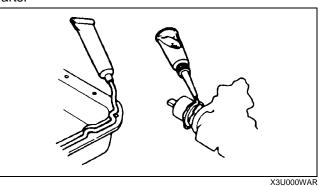

#### Reassembly

- · Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.
- · If removed, these parts should be replaced with new ones:
  - Oil seals
  - Gaskets
  - O-rings
  - Lockwashers
  - Cotter pins
  - Nylon nuts
- Depending on location:
- Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
- Oil should be applied to the moving components of parts.
- Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.

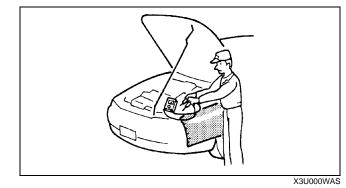

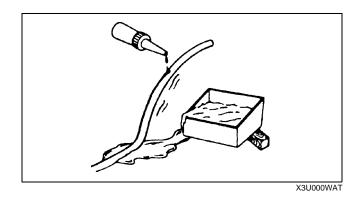

#### Adjustment

• Use suitable gauges and/or testers when making adjustments.

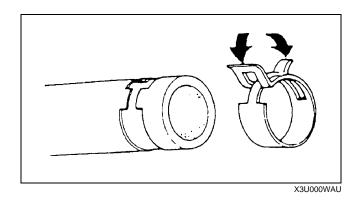

#### **Rubber Parts and Tubing**

• Prevent gasoline or oil from getting on rubber parts or tubing.

#### **Hose Clamps**

 When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

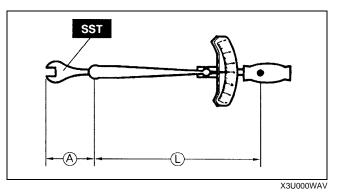

Torque Formulas

 When using a torque wrench-SST or equivalent combination, the written torque must be recalculated due to the extra length that the SST or equivalent adds to the torque wrench. Recalculate the torque using the following formulas. Choose the formula that applies to you.

| Torque Unit | Formula                         |
|-------------|---------------------------------|
| N∙m         | $N \cdot m \times [L/(L+A)]$    |
| kgf∙m       | kgf⋅m × [L/(L+A)]               |
| kgf∙cm      | kgf⋅cm × [L/(L+A)]              |
| ft-lbf      | $ft \cdot lbf \times [L/(L+A)]$ |
| in∙lbf      | $in \cdot lbf \times [L/(L+A)]$ |

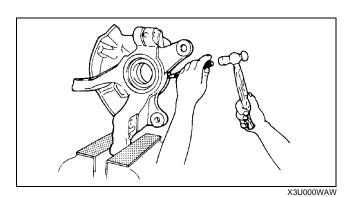

A : The length of the **SST** past the torque wrench drive.

L : The length of the torque wrench.

#### Vise

• When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.

Dynamometer

- When test-running a vehicle on a dynamometer:
  - Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
  - Connect an exhaust gas ventilation unit.
  - Cool the exhaust pipes with a fan.
  - Keep the area around the vehicle uncluttered.
  - Watch the water temperature gauge.

#### Note

• When the vehicle is on a chassis roller and only the front wheels rotate, the ABS warning light may illuminate. (Refer to 04–10–1 PRECAUTION (BRAKES) to turn off the warning light.)

#### INSTALLATION OF RADIO SYSTEM

If a radio system is installed improperly or if a high-powered type is used, the CIS and other systems may be affected. When the vehicle is to be equipped with a radio, observe the following precautions:

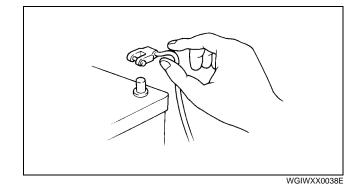

- Install the antenna at the farthest point from control modules.
- Install the antenna feeder as far as possible from the control module harnesses.
- Ensure that the antenna and feeder are properly adjusted.
- Do not install a high-powered radio system.

#### ELECTRICAL SYSTEM

#### **Electrical Parts**

#### **Battery cable**

• Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.

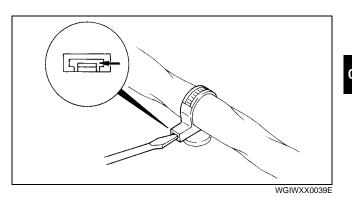

A3U00000005W01

A3U00000006W01

#### Wiring Harness

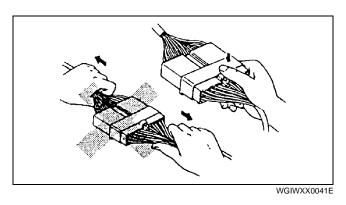

• To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.

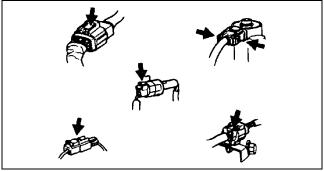

Connectors Disconnecting connectors

• When disconnecting connector, grasp the connectors, not the wires.

• Connectors can be disconnected by pressing or pulling the lock lever as shown.

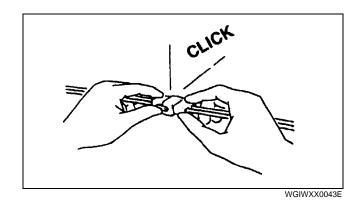

WGIWXX0042E

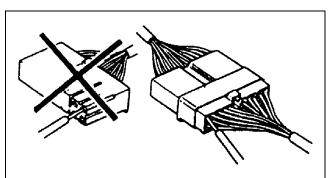

#### Locking connector

• When locking connectors, listen for a click indicating they are securely locked.

#### Inspection

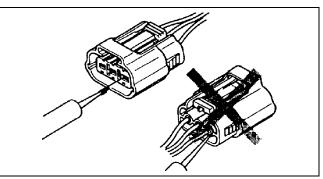

- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.
- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.

WGIWXX0044E

#### Caution

• To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.

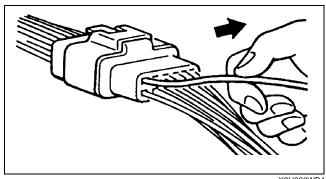

WGIWXX0045E

# Terminals

#### Inspection

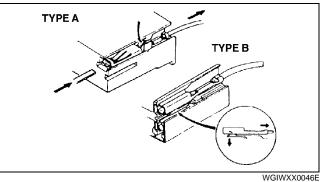

· Pull lightly on individual wires to verify that they are secured in the terminal.

X3U000WB4

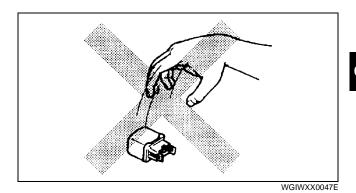

#### Replacement

- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- · Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.

#### Sensors, Switches, and Relays

 Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.

Wiring Harness Wiring color codes

- Two-color wires are indicated by a two-color code symbol.
- The first letter indicates the base color of the wire and the second the color of the stripe.

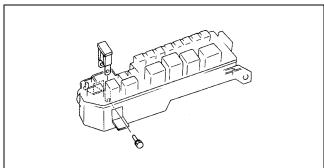

| CODE | COLOR       | CODE | COLOR  |
|------|-------------|------|--------|
| В    | Black       | 0    | Orange |
| BR   | Brown       | Р    | Pink   |
| G    | Green       | R    | Red    |
| GY   | Gray        | V    | Violet |
| L    | Blue        | W    | White  |
| LB   | Light Blue  | Y    | Yellow |
| LG   | Light Green |      |        |

### Fuse

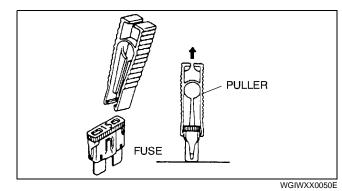

#### Replacement

- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse fails again, the circuit probably has a short and the wiring should be inspected.
- Be sure the negative battery terminal is disconnected before replacing a main fuse.

WGIWXX0049E

• When replacing a pullout fuse, use the fuse puller.

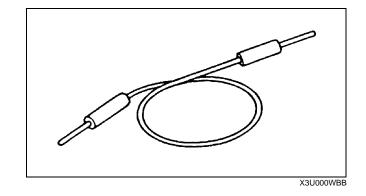

# Electrical Troubleshooting Tools Jumper wire

• A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.

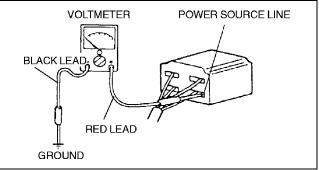

#### Caution

 Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.

#### Voltmeter

• The DC voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.

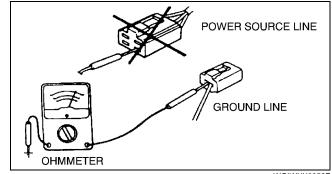

WGIWXX0051E

#### Ohmmeter

• The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

#### Caution

• Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.

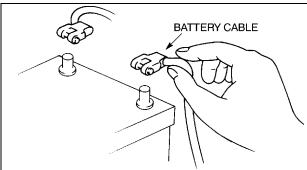

WGIWXX0052E

#### **Precautions Before Welding**

A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

1. Turn the ignition switch to the LOCK position.

2. Disconnect the battery cables.

GROUND

WGIWXX0007E

00–00

- 3. Securely connect the welding machine ground near the welding area.
- 4. Cover the peripheral parts of the welding area to protect them from weld spatter.

WGIWXX0008E

#### Warning

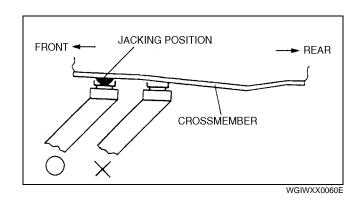

**JACKING POSITIONS** 

A3U00000007W01

- Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking positions and block the wheels.
- Use safety stands to support the vehicle after it has been lifted.

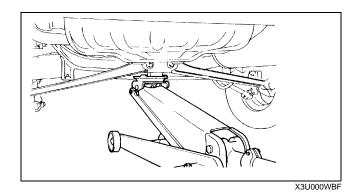

#### Front

• At the center of the crossmember

#### Rear

• At the center of the crossmember

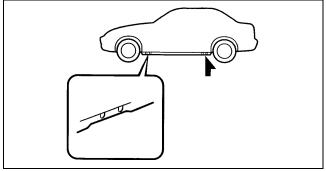

00-00-21

#### VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITION

Vehicle Lift Positions Front and rear A3U00000008W01

Warning

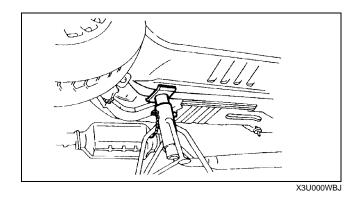

• Unstably lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.

X3U000WBH

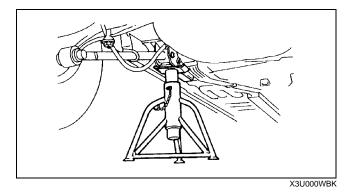

#### Safety Stand Positions Front

• Both sides of the vehicle, on side sills.

#### Rear

• Both sides of the vehicle, on side sills.

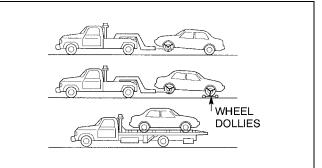

#### TOWING

- Proper lifting and towing are necessary to prevent damage to the vehicle. State and local laws must be followed.
- A towed vehicle usually should have its front wheels off the ground. If excessive damage or other conditions prevent this, use wheel dollies.

• When towing with the rear wheels on the ground, release the parking brake.

Caution

• Do not tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.

YLU000WA5

00–00

#### Caution

• Do not tow the vehicle backward with driving wheels on the ground. This may cause internal damage to the transaxle.

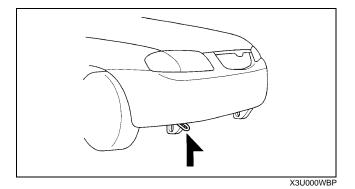

YLU000WA7

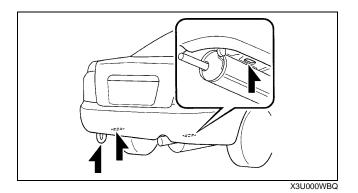

Caution

• Do not use the hook loops under the front and rear for towing. They are designed ONLY for tying down the vehicle when it is being transported. Using them for towing will damage the bumper.

#### PRE-DELIVERY INSPECTION

# Pre-Delivery Inspection Table

### Exterior

**INSPECT** and **ADJUST**, if necessary, the following items to specification: Glass, exterior bright metal and paint for damage

□Wheel lug nuts

□All weatherstrips for damage or detachment

Depretion of hood release and lock Deperation of trunk lid and fuel lid opener

Door operation and alignment

□Headlight aiming

**INSTALL**the following parts:

□Wheel caps

#### Under hood—engine off

**INSPECT** and **ADJUST**, if necessary, the following items to specification:

□Fuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks

Engine oil level

DPower steering fluid level

Brake and clutch fluid level

□Windshield washer reservoir fluid level

□Radiator coolant level and specific gravity

Tightness of water hose clamps

Tightness of battery terminals, electrolyte level and specific gravity

Drive belt(s) tension

Accelerator cable and linkage for free movement CLEAN the spark plugs

#### Interior

**INSPECT** the operations of the following items:

□Seat controls (slide and recline) and headrests

□Folding rear seat (if equipped)

Door locks, including childproof door locks (if equipped)

□Seat belts and warning system

□Ignition switch and steering lock

□Air bag system using warning light

Cruise control system (if equipped)

- □Shift-lock system (if equipped)
- □Starter interlock

□All lights including warning, and indicator lights

□Sound warning system

□Horn, wipers, and washers

□Wiper blades performance

Clean wiper blades and windshield, if necessary

□Antenna

□Audio system (if equipped)

□Cigarette lighter and clock

□Power windows (if equipped)

Deater, defroster, and air conditioner at various mode selections (if equipped)

**INSPECT** the following items:

□Presence of spare fuse

DUpholstery and interior finish

**INSPECT** and **ADJUST**, if necessary, the following items:

Operation and fit of windows

□Pedal height and free play of clutch pedal

□Parking brake

#### Under hood—engine running at operating temperature

**INSPECT** the following items:

DAutomatic transaxle fluid level

Operation of idle-up system for electrical load, air conditioner or power steering (if equipped)

□Ignition timing

□Idle speed

A3U000000012W01

00-00

## On hoist

INSPECT the following items: Manual transaxle oil level Underside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks Tires for cuts or bruises Steering linkage, suspension, exhaust system, and all underside hardware for looseness or damage

### Road test

INSPECT the following items: Brake operation Clutch operation Steering control Operation of gauges Squeaks, rattles, and unusual noises Engine general performance Emergency locking retractors and automatic locking retractors Cruise control system (if equipped)

#### After road test

INSPECT for necessary owner information materials, tools, and spare tire in vehicle The following items must be done just before delivery to your customer. □Load test battery and charge if necessary (Load test result: Volts) □Adjust tire pressure to specification (Specified tire pressure is indicated on the door label.) □Clean outside of vehicle □Install fuses for accessories □Remove seat and cabin carpet protective covers □Vacuum inside of vehicle

#### SCHEDULED MAINTENANCE

#### Scheduled Maintenance Table

Schedule 1 : (Normal driving conditions) U.S.A.

• The vehicle is mainly operated where none of the "unique driving conditions" apply.

|                               | Maintenance Interval (Number o | of month                                     |  |  |   | s), whic                                     | hever c                                      | comes t              | first)           |
|-------------------------------|--------------------------------|--|--|--|---|--|--|----------------------|------------------|

#### **Chart symbols**

- I : Inspect and repair, clean, adjust, or replace if necessary. (Oil-permeated air cleaner elements cannot be cleaned using the air-blow method.)
- R : Replace
- L : Lubricate

#### Remarks

- After the described period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked in the maintenance chart.
- \*1 : According to state and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage period to ensure long-term reliability.

00-00

#### Schedule 2 : Canada, Puerto Rico and (Unique driving conditions) U.S.A.

Unique driving conditions consist of :

- Repeated short-distance driving.
- Driving in dusty conditions.Driving with extended use of brakes.
- Driving in areas where salt or other corrosive materials are used.
- Driving on rough or muddy roads.
- Extended periods of idling or low-speed operation.
- Driving for long periods in cold temperatures or extremely humid climates.

#### **Chart symbols**

- I : Inspect and repair, clean, adjust, or replace if necessary. (Oil-permeated air cleaner elements cannot be cleaned using the air-blow method.)
- R : Replace
- L : Lubricate

#### Remarks

- After the described period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked \* in the maintenance chart.
- \*1 : According to state and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage period to ensure long-term reliability.
- \*<sup>2</sup> : If vehicle is operated in cold districts {below -18 °C (0 °F)}, replace the timing belt at 96,000 km (60,000 miles).
